

Benchmark Rates Liquidity Monitor

December 2021 | Issue 11

ESTR trading volumes dropped in December, but not as much relative to EURIBOR. This is consistent with a drop in volumes in December for all currencies for both old and new benchmarks. SONIA trading volumes continue to dominate GBP swaps market; however, some activity still took place in GBP LIBOR ahead of December cessation.

EUR

ESTR monthly trading volumes in December dropped to 600bln. (**Chart 1**) due to the year-end according to the Swapsinfo data. In both absolute and relative terms this was less significant than a decrease in EURIBOR volumes from 5.1bln. to 1.7bln. USD. Monthly trade count came back to 2,000 compared 200 to 400 in the previous months (**Chart 2**). EONIA and ESTR to EURIBOR trading ratios remain consistent in 5Y+ tenors, but continued to stay at 70%-80% in the short-end of the curve (**Charts 9 and 10**).

GBP

The transition from GBP LIBOR to SONIA in the GBP can now be considered as completed. According to the Swapsinfo data GBP LIBOR trade count in December remained around 500 versus 7,000 in SONIA (**Chart 4**). Monthly trading volumes in SONIA swaps (1,100bln USD) fully dominated GBP rates space rather than in GBP LIBOR (less than 100bln USD, **Charts 3 and 11**).

USD

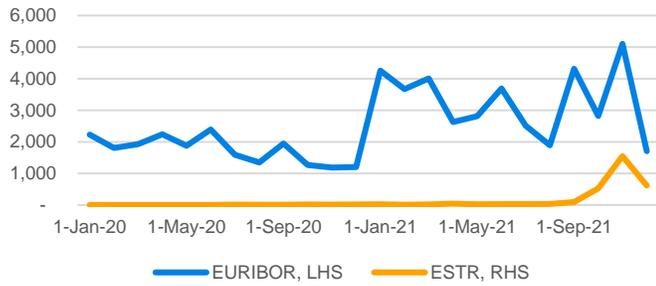

Beginning Jan. 1, 2022, the "no new LIBOR" regulatory guidance will take effect, with the exception of limited circumstances. This guidance had a significant impact on the US rate derivatives market heading into the new year. The volume and trade count data indicate there was a slowdown in both LIBOR and SOFR swap activity in December (**Charts 5 and 6**). However, most of this was driven by a wider slowdown in activity. Compared to LIBOR, SOFR swap volumes and trade count fared better going into the "no new LIBOR" deadline. SOFR swap volumes exceeded those in LIBOR across maturities, particularly in the long end (**Charts 13 and 14**).

JPY

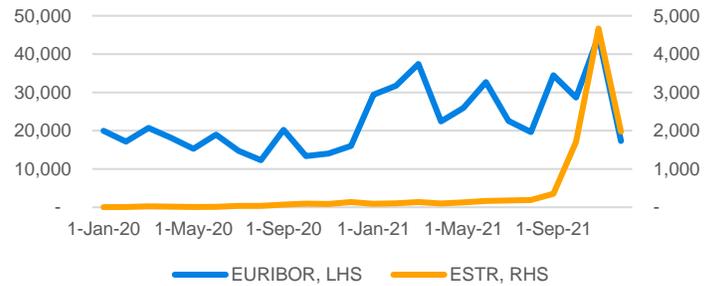

Similar to the GBP market, the transition from JPY LIBOR to TONA can also be considered complete. Despite the decline in the monthly trading volume of trades linked to JPY TONA from 240bln USD to 151bln USD in December, the monthly volume still far exceeds the comparable trades linked to JPY LIBOR at only 2bln USD for the same month (**Chart 7**). We can see a similar trend in the monthly trade count, with around 2000 trades linked to TONA versus only 35 trades linked to JPY LIBOR (**Chart 8**). The TONA to LIBOR trading ratios at individual tenors also show a similar story (**Chart 15 and 16**).
